

1-15. (cancelled).

16. (currently amended): A stabilizer mixture comprising a component a) and a component e)
where

component a) is a compound of the formula

where

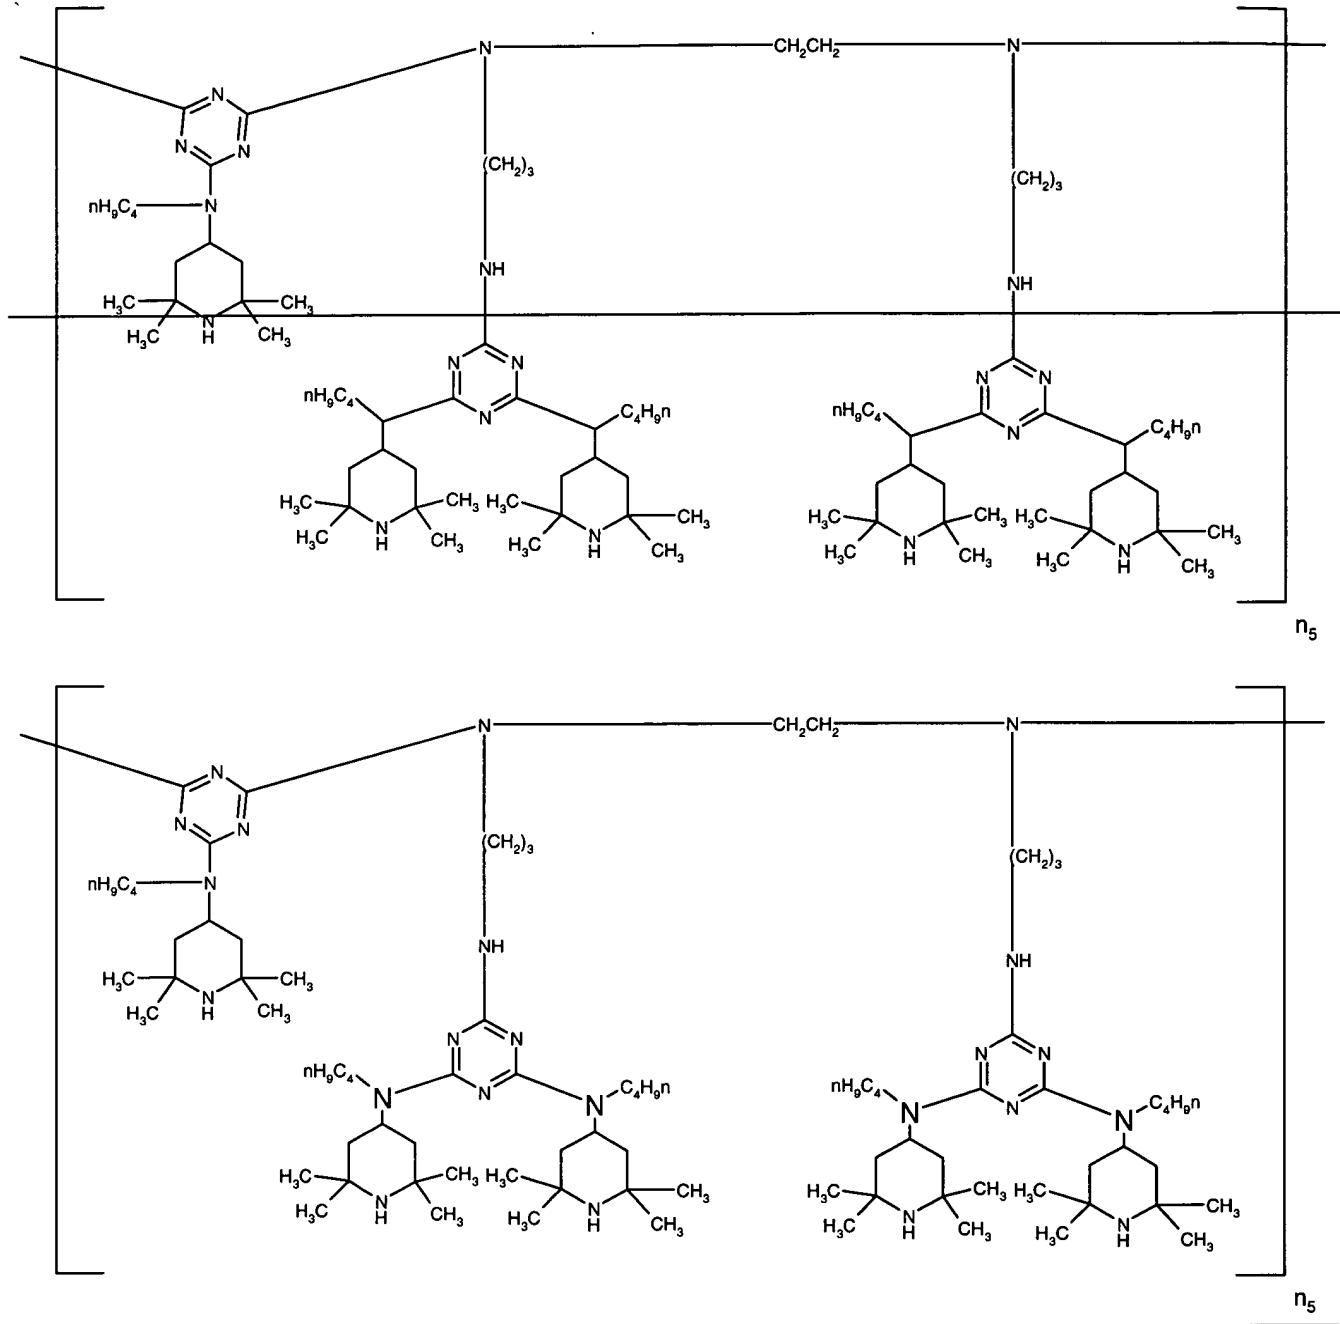

R_1 is hydrogen or methyl,

R_2 is $\text{C}_1\text{-C}_{10}$ alkylene,

n_1 is a number from 2 to 50,

and

component e) is a compound of the formula

where n_5 is 1 to 20, and

where the weight ratio between component a) and component e) is about 20:1 to about 1:20.

- 17. (previously presented):** A stabilizer mixture according to claim 16, wherein the weight ratio between component a) and component e) is from 5:1 to 1:5.
- 18. (previously presented):** A stabilizer mixture according to claim 16, wherein the weight ratio between component a) and component e) is 1:1.
- 19. (previously presented):** A stabilizer mixture according to claim 16, wherein R₁ is hydrogen, R₂ is ethylene and n₁ is a number from 2 to 25.
- 20. (previously presented):** A composition comprising an organic material which is sensitive to oxidative, thermal or light-induced degradation and a stabilizer mixture according to claim 16.
- 21. (previously presented):** A composition according to claim 20, in which the organic material is a polyolefin.
- 22. (previously presented):** A composition according to claim 20, in which the organic material is polyethylene, polypropylene or a copolymer of polyethylene or polypropylene.
- 23. (previously presented):** A process for stabilizing an organic material which is sensitive to oxidative, thermal or light-induced degradation, which comprises incorporating a stabilizer mixture according to claim 16 into the organic material.
- 24. (previously presented):** A composition comprising an organic material which is sensitive to oxidative, thermal or light-induced degradation and a stabilizer mixture according to claim 19.

25. (previously presented): A composition according to claim **24**, in which the organic material is a polyolefin.

26. (previously presented): A composition according to claim **24**, in which the organic material is polyethylene, polypropylene or a copolymer of polyethylene or polypropylene.

27. (previously presented): A process for stabilizing an organic material which is sensitive to oxidative, thermal or light-induced degradation, which comprises incorporating a stabilizer mixture according to claim **19** into the organic material.
